Suicide and PTSD in Problem Gamblers (8 CEU)

Presented by: Randi Jensen, LMHC, CCDC

A 2006 study estimated that post-traumatic stress symptoms are clinically significant, undertreated, and extremely problematic in nearly one-third of the problem gamblers studied (Ledgerwood & Petry, 2006). Problem gambling and suicidality seem to go hand-in-hand. A 2005 study of a Connecticut Helpline revealed one quarter of the callers reported gambling related suicide attempts. In addition, problem gamblers had considerably higher rates of trauma (physical and sexual abuse), compared to national samples (Specker et al., 1996). This seminar explores the co-morbidity of post-traumatic stress and suicidality in problem gamblers. A literature search of treatment for PTSD among problem or pathological gamblers revealed a paucity of effective screening and treatment for these challenges to recovery from compulsive gambling.

Saturday, January 21, 2012

Integrating Spirituality and Religious Belief into Counseling (6 CEU)
